MOTO-STOP

Moto-Stop bodies are made of 6061 aluminum with bushings and pads of 95 durometer urethane. The assembly hardware is all stainless steel. These materials make for a very strong, durable, and quality product that is going to last for many years. As shown in the pictures each Moto-Stop unit comes with a heavy duty canvas bag which will prevent soil transfer and a pair of steering rod clips to prevent wind vaneing of the motor while in tow. Our design requires absolutely no bolts or drilling, simply raise the motor, slide the Moto-Stop over the Trim Rods, lower the motor, and snap on the clips. Moto-Stop will truly be the last Transom Saver you will ever need.

MERCURY MOTO-STOP

The Mercury Model fits a motor with an approximate trim rod distance of 4 7/8 inches from center to center and trim rod diameters of 5/8 inches (.625")

TIP-STOPS

Moto-Stop Tip Stops are a handy accessory for any fisherman that carries more than a single rod. These custom built holders securely hold your fishing rod tips using an elastic strap that quickly and effortlessly pulls over and hooks on the opposite side. Tip-Stops come in a variety of sizes to fit your tip holding needs and boat configuration, mount directly to fiberglass hauls, and include a three point self leveling base system. To attach to haul simply secure the mounting plate with two screws and then mount the rack to the mounting plate using the included thumb screw

SIX ROD TOWER STYLE TIP-STOP

RACKS AND JACKS

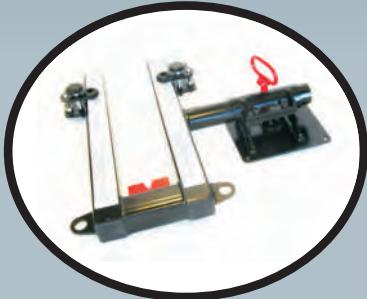

STERNDRIVE/LOWER UNIT RACK

This rack holds most sterndrives and outboard lower units and allows you to move them quickly and easily. Built in clamps make use of cavitation plates to hold the units in place while rubber snubbers and rail pads protect the finish. The rack holds a maximum of three units at once and round tube handle makes moving convenient.

[See Product Online ▶](#)

STERNDRIVE/INSTALLER JACK

The Sterndrive Installer Jack makes installation, removal, and transporting marine outdrives easier and safer. Fitting most makes and models this jack raises, lowers, and tilts in both directions. Safety features include cavitation plate clamps and ratchet strap to protect the outdrive. Jack shown with optional cherry picker attached.

[See Product Online ▶](#)

STERNDRIVE/LOWER UNIT SERVICE BENCH MOUNT

Featuring 360 degree rotation, right and left hand positioning by means of a quick pull index pin, clamping is reversible with protective surfaces top and bottom, and a urethane block protects and centers the drive. The two holes located opposite of the clamps on the rack are for the safety straps when flipping over the outdrive/lower end.
